List of authorized compounds (supplement)	1

LIST OF CHEMICAL COMPOUNDS

AUTHORIZED FOR USE UNDER USDA MEAT, POULTRY, RABBIT, AND EGG PRODUCTS INSPECTION PROGRAMS

INTRODUCTION

This supplement lists changes in, additions to, or deletions from the complete "List of Chemical Compounds" effective January 1, 1976. This supplement is to be used in conjunction with that publication, not as a replacement for it.

THIS SUPPLEMENTARY LIST IS EFFECTIVE AS OF JULY 1, 1976

Compounds authorized by letters from the U.S. Department of Agriculture after the effective date of this supplement are also acceptable.

CHANGES TO THE TEXT (PAGES 1 THROUGH 12)

On page 4, line 37, 2nd column, delete reference to "F D & C Red No. 2" as an acceptable substance for denaturing poultry products intended for disposal for purposes other than human food.

On page 7, replace the information provided for category code letters F and G on lines 12 through 29 with the following text:

F. Sanitizers for all surfaces always requiring a rinse.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, surfaces must be thoroughly rinsed with potable water before operations are resumed. The compounds must be used according to applicable label directions.

G. Sanitizers for all surfaces not always requiring a rinse.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. A potable water rinse is not required following use of these compounds on previously cleaned hard surfaces provided that the surfaces are adequately drained before contact with food so that little or no residue remains which can adulterate or have a deleterious effect on edible products. A potable water rinse is required following use of these compounds under conditions other than those stated above. The compounds must always be used according to applicable label directions.

HOW TO USE THIS SUPPLEMENT

When attempting to confirm the authorization for a particular compound, first check the complete listing in the previous edition of the "List Of Chemical Compounds." Whether or not the compound appears in that listing, also check this supplement to see if there has been an amendment to the complete listing which affects that compound. Amendments to the complete listing of compounds are indicated by a three character prefix followed by a slash mark. The prefixes used and the explanation of their meanings are as follows:

add/—indicates that authorization for the firm or compound following has been issued since the complete listing was printed. If the prefix precedes a firm name, authorization for all compounds below that firm name has been issued since the complete listing was printed.

del/—indicates that authorization for the firm or compound has been terminated since the complete listing was printed. If the prefix precedes a firm name, the authorization for all compounds listed under that firm name in the complete revision has been terminated.

chg/—indicates that authorization for the firm or compound has changed since the complete listing was printed. If the name of a firm or compound has changed, the former name under which it was authorized in the complete revision is indented on the following line. If no former name follows a compound change, the only amendment is in the category code letters indicating the authorized uses of the compound. The amendment may be the addition, deletion, or change of one or more category codes.

LIST OF AUTHORIZED COMPOUNDS (SUPPLEMENT)

(In the following list, compounds are arranged alphabetically
by trade name under the heading of the firm by which they are marketed)
